Serenity® Non Invasive Pre-natal Screening (including mandatory scan)		
Accurate way of estimating the risk of the baby having the most common chromosome abnormalities including Down's syndrome (trisomy 21), Edward's syndrome (trisomy 18) and Patau syndrome (trisomy 13). The test is done by using a simple non-invasive blood test of the mother that analyses genetic material (or DNA) from the baby which is normally present in the mother's blood. This test can be done from 10 weeks gestation.		
	£550
